SMART CONSTRUCTION Pilot Web v5.1.0 Updates

EARTHBRAIN

Modifications/bug fixes

Support for improved guidance screen performance of tablet apps.

・To improve the performance of the tablet app, support for some of the data used by the tablet app is performed when creating the project file.

If you are using v1.0.04 or later of the tablet app and wish to improve the performance of the guidance screen, please update (recreate) your project on the Pilot Web.

Support for switching the display format of the date input field by language

・The date display format, which switches according to the browser language setting, was fixed (YYYYY/MM/DD hh:mm:ss) in the date input field, so it is now switched according to the language setting.

Correspondence to the issue that nothing is displayed in the notification when the browser language setting is other than "Japanese", "French", "German", or "Spanish".

・ Support for displaying notifications (in English) even when the settings are not in "Japanese," "French," "German," or "Spanish.
